Look Good, Feel Better, Build Great: Developing Better Workwear Options for Women in the Skilled Trades

[Article originally appeared in www.constructionexec.com]

By Nadia Sinner

Women's participation in the skilled trades has steadily increased in recent years, rising from 8.9% in 2010 to 11% today. However, this progress has not come without challenges—one being access to functional, durable and comfortable workwear. Historically, jobsite apparel has been designed with only male workers in mind, leaving tradeswomen with clothing that compromises fit, mobility and overall functionality.

With more women entering the trades, their voices have amplified the demand for workwear that truly supports productivity, movement and protection. This shift has prompted some manufacturers to rethink traditional designs, ensuring that workwear keeps pace with the evolving workforce rather than forcing tradeswomen to adapt to outdated standards.

IDENTIFYING KEY CHALLENGES

Field research plays a crucial role in understanding the realities of the jobsite and ensuring workwear meets the demands of tradeswomen. By engaging directly with workers in the field, research teams have gathered firsthand insights, allowing product development to be driven by real-world needs rather than assumptions.

Through this research, a clear pattern emerged, highlighting the most significant challenges

Image credit www.cranepointllc.com

tradeswomen face with existing workwear:

- Fit and mobility issues: Work pants were often too stiff, low-waisted or restrictive, limiting movement.
- Lack of durability: Many women's options sacrificed durability for comfort, leading to premature wear and tear on the jobsite.
- Limited protection features: Key elements like reinforced knees, tool storage and breath-

able yet durable fabrics were either missing or poorly designed for tradeswomen.

A HUMAN STUDY CASE STUDY

Understanding these frustrations, brands are taking a research-driven, jobsite-tested approach to designing women's workwear. Rather than simply scaling down men's clothing, the design process prioritizes ergonomics, fit and durability. Direct feedback from tradeswomen played a crucial role in shaping practical solutions tailored to

real jobsite demands.

"We took the time to be in the field and truly understand what was needed to create a full breadth of line that dressed women from head to toe—not just release a single item," said Nadia Sinner, product manager at Milwaukee Tool. "Every cut, stitch and loop were meticulously intentional, ensuring that each piece addressed the real challenges tradeswomen face on the job."

Event Recap: ConstructConnect at World of Concrete 2025

[Article originally appeared in www.constructconnect.com]

By Maila Kim

World of Concrete 2025 was nothing short of incredible. This annual event is more than just a trade show—it's a celebration of the concrete and masonry industries and the people who drive them forward.

For ConstructConnect, it's a chance to connect with people who share our passion for construction. Walking through the halls of the Las Vegas Convention Center, it was clear to us that this industry is built on grit, skill, and innovation. Every conversation, product demo, and interaction highlighted the dedication of the people who laid the literal foundation for the world around us.

Hands-On Experience

At our booth, we didn't just enjoy talking about our solutions—we enjoyed putting them in your hands. Our team set up six hands-on demo stations featuring solutions like:

- ConstructConnect Project Intelligence®
- Bid Management®
- Insight®

- On-Screen Takeoff®
- PlanSwift®
- Takeoff BoostTM

The response was electric. People saw firsthand how these tools simplify workflows, cut out busy work, and help them win more jobs. And because we know the little things matter, we gave away 750 pairs of branded socks—sparking conversations and leaving attendees with something useful (and comfy)!

What Customers Are Saying

One of the highlights of World of Concrete was hearing from our customers. Nothing inspires us more than hearing how our tools make our customers' jobs easier on the ground.

"ConstructConnect gives me the visibility of what's going on in the industry."

- Jason Claproth, Solid Solutions Products

"Before we started using ConstructConnect, our processes involved a lot of manual searching. ConstructConnect eliminated a lot of those manual searches."

- Derek McElroy, Ram Jack

"After ConstructConnect, we spend significantly less time prospecting due to the automated reports, the spreadsheets, and the insights...It makes my job easier. It makes my team more efficient."

- Nick Johnson, BW Manufacturing

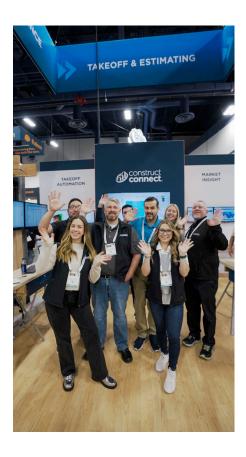

Hearing real stories like these keeps us motivated to keep making our tools better. Check out more testimonials from World of Concrete 2025 here.

Industry Trends and Learnings

World of Concrete wasn't just about showcasing what we do—it was an opportunity to learn from the broader industry and discuss where it's headed. One of the hottest topics this year? The rise of artificial intelligence (AI) and its potential to transform construction.

This trend hits close to home for ConstructConnect because tools like Takeoff Boost are built to streamline repetitive workflows, making takeoffs faster and more accurate. By reducing the chances of errors and saving valuable time, Takeoff Boost empowers estimators to focus on crafting precise estimates and winning more jobs

Developing Better Workwear Options for Women in the Skilled Trades

Continued from page 1

This approach led to key adjustments that improve functionality and performance in demanding work environments. For example, a high-rise, straight-fit jogger with built-in stretch and an elastic-integrated waistband provides greater mobility while staying secure throughout the workday. Wide waistbands enhance support, while deep, durable pockets offer convenient storage for tools and essentials. Additionally, reinforced belt loops can prevent sagging when wearing tool belts, ensuring both stability and sturdiness on the job.

To further address comfort and wearability, hoodies can be designed with extra room to accommodate ponytails and longer hairstyles. As well, shirts can be tailored with drop-tail hems to provide better coverage when bending or reaching overhead, preventing exposure and ensuring a more secure fit and peace of mind. These redesigns required rethinking traditional designs to better support tradeswomen working in dynamic environments without sacrificing comfort.

Products like these are undergoing continuous field testing to balance comfort and performance, ensuring that every stitch of workwear is built for the realities of women working in the trades

MADE BY TRADESWOMEN, FOR TRADESWOMEN

Authenticity is an essential element in developing workwear that truly meets the needs of tradeswomen, delivering solutions that will meet the demands of a professional. Creating a women's workwear line requires more than just research—it demands the voices and expertise of women at every stage. A female-led team played

a crucial role in shaping Milwaukee's decisions, ensuring that fit and functionality addressed realworld jobsite challenges. Women across sourcing, purchasing, legal and marketing influenced every phase of development, ensuring that both product design and brand messaging aligned with tradeswomen's needs. Their insights resulted in workwear that is not only functional and durable, but also genuinely representative of

By maintaining authenticity throughout the research and design process, manufacturers can reinforce the importance of listening to those who know how women work on the jobsite best.

SETTING A NEW STANDARD

The revolution of high-performance, femalespecific workwear is more than just a few product launches—it marks a shift in how the industry supports tradeswomen. As their representation in skilled trades grows, so does the demand for apparel and resources designed to meet their needs.

Ongoing field research, product testing and innovation are driving the evolution of workwear, ensuring it keeps pace with the workforce. Looking ahead, the focus remains on expanding solutions and enhancing materials to provide gear that offers both functionality and longevity in demanding jobsite conditions.

Women's presence in the trades is no longer emerging-it is firmly established. Advancing functional, long-lasting and thoughtfully designed workwear is a critical step in reinforcing their role in shaping the future of construction and skilled trades
