# Closed-off Interstate 10 is no stranger to major damage or political attention

An empty Interstate 10 remains closed after a fire burned under the freeway in downtown Los Angeles shortly after midnight on Nov. 11, 2023. Gov. Gavin Newsom held a press conference on Tuesday where he stated that the fire was deliberately set and that the freeway may be in better shape than first thought. Photo by Ted Soqui, Reuters

#### By Dan Walters, CalMatters

If any freeway is a cultural icon, it is Interstate 10, which stretches more than 2,460 miles through eight southern tier states, from the Pacific Ocean in Santa Monica to the Atlantic in Jacksonville, Florida.

Its iconic status is especially evident in Southern California, where it is known by several names as it runs through the heart of the Los Angeles metropolitan area, carrying 300,000 vehicles a day.

To those who continue the region's tradition of naming roadways, it's the Santa Monica Freeway. Traffic reporters refer to it as "The 10." At one time, there was even a serious movement for Christopher Columbus – before, of course, the explorer became politically incorrect.

By any name, I-10 is an important artery for a region that still depends on autos and trucks to carry people and goods. Its vital role makes it, from time to time, a political lightning rod.

The freeway's biggest political brouhaha erupted in 1976, when the pavement of one lane in each direction was marked with diamond-shaped symbols and reserved for cars carrying at least three passengers – the state's first experiment discouraging single-occupant driving. The immediate result was traffic chaos both on the freeway and on nearby surface streets and countless angry drivers.

Although the so-called diamond lanes experiment had been planned during Republican Ronald Reagan's governorship, Jerry Brown was governor when Caltrans made the switch, just as he was launching his first campaign for president.

Nevertheless, it reflected Brown's philosophy. "Obviously," he said that year in a speech, "the ethic of unlimited freeways that attempt to pour cement from one end of the state to the other is over and it takes a while for people to adjust to that."

Adriana Gianturco, an old college friend of Brown's who had been an urban planner in Boston, became Caltrans director the same day and had nothing to do with the project, but immediately became its much-despised symbol.

Five months after the diamond lanes experiment began, a judge ruled that it had not undergone a needed environmental impact review and with opposition still raging, the Brown administration quietly dropped it.

Eighteen years later, in 1994, I-10 once again became the center of political attention when the Northridge Earthquake seriously damaged the elevated structure. Although many other public facilities were also damaged, I-10's central role made repairs a priority.

Then-Gov. Pete Wilson declared a state of emergency and the state hired a construction firm from the Sacramento area, headed by a larger-than-life builder named C.C. Myers, to rebuild

# **7 Tech Tips for Construction Contractors**

[ Article originally appeared in www.forconstructionpros.com ]

#### By Patrick Chown, The Network Installers

The construction industry, long associated with hard hats, concrete, and heavy machinery, has experienced a digital transformation in recent years. Gone are the days when construction sites were primarily mechanical operations; now construction sites are rapidly evolving into technology-driven environments. As construction projects become increasingly complex and the need for efficiency grows, the industry is embracing a range of digital tools and technologies to stay competitive.

The aim of this article is to delve into the critical role that network infrastructure plays in modern construction sites. We will explore how a strong, reliable network is foundational to leveraging the array of technologies that modern construction now depends on, from IoT devices to data analytics.

#### The Digital Transformation of Construction Sites

The phrase "smart construction" is more than just a buzzword; it encapsulates the significant shift toward integrating digital tools and technologies into the construction process. This digital transformation is impacting every aspect of construction, from planning and design to execution and monitoring.

For instance, Internet of Things (IoT) devices are now widely deployed on construction sites for a range of purposes. Sensors can monitor temperature and humidity levels, ensuring that conditions are optimal for certain materials like concrete to set. These sensors can send data in real-time to centralized dashboards, enabling immediate adjustments and real-time decision-making.

Drones are another game-changer in the industry, often used for aerial surveys to help in site selection, monitoring construction progress, and ensuring safety compliance. Meanwhile, advanced project management software tools offer

capabilities like 3D modeling, task scheduling, and resource allocation, which were unimaginable a decade ago.

Collectively, these technologies—sensors, drones, project management software, and many more—are making construction sites smarter and more efficient. However, the effectiveness of these technologies is heavily dependent on the underlying network infrastructure that supports them. Without robust and reliable network connectivity, the full potential of these tools could remain untapped, leaving construction projects vulnerable to inefficiencies, delays, and increased costs.

#### The Importance of Network Infrastructure

A robust network infrastructure acts as the backbone supporting all the digital tools and technologies employed on a construction site. Just as a physical foundation must be solid to support a building, the digital foundation must be robust to support complex technologies that rely on fast, seamless communication and data transfer. Imagine a site where drones are providing realtime footage of construction progress, sensors are monitoring various environmental parameters, and project management tools are keeping tabs on resource allocation—all simultaneously. Without a reliable network infrastructure, the data collected by these devices and systems could be delayed or lost, leading to inefficiencies and potentially costly errors. A strong network ensures that all these data streams can be synthesized in real-time, allowing for dynamic decision-making that can enhance productivity, reduce costs, and ensure safety.

Additionally, the value of effective communication cannot be overstated in a construction setting. In an environment where any miscommunication can result in delays or safety risks, strong network connectivity ensures that project managers, engineers, and on-site workers can stay in constant communication, sharing updates and making quick decisions based on real-time data.

# Closed-off Interstate 10

#### Continued from page 1

the freeway with huge financial incentives for rapid completion. Myers' crews worked aroundthe-clock and finished repairs 74 days ahead of schedule, earning a reported \$200,000 a day bonus. The tab doubled from \$14.9 million to \$30 million, but it was worth it since closure of the freeway was costing the local economy an estimated \$1 million a day.

I-10 is back on the front pages because a weekend fire in pallet storage yards under the freeway - arson, officials said - damaged the structure so badly that it was closed off.

The fire put Gov. Gavin Newsom and Los Angeles Mayor Karen Bass on the spot to get the freeway fixed and back in operation as quickly as possible. During a Monday press conference, with workers in the background shoring up scarred pillars, both pledged to do so and on Tuesday Newsom estimated that repairs would take three to five weeks.

Newsom and Bass deflected suggestions that the homeless camps next to the pallet yards might have been responsible for the fire but the suspicion adds to the already raging public anger over such camps

The I-10 countdown begins again.

# **CLEVELAND, OHIO SUB-BID REQUEST AD**

# 6 Keys To Subcontractor Prequalification Success

[ Article originally appeared in www.constructconnect.com ]

#### By Kendall Jones

As a general contractor, you have to be selective when it comes to the subcontractors you work with. You want to choose companies that have a dependable skilled workforce, strong management, financial stability, and can perform quality work to your company's standards. To do this, you need to have an established subcontractor prequalification process in place.

As with any business decision, picking subcontractors to work with requires you to do your due diligence. You should be prequalifying every subcontractor you're considering working with to reduce risks that could impact your business, such as subcontractor default or substandard work.

Maybe you have a stable of subcontractors you routinely do business with, but what happens when you decide to take on a project in another state or all of your regular subcontractors are unavailable? At some point, you are going to work with a subcontractor that you have little to no experience working with. Prequalifying subcontractors before you solicit pricing or subcontractor bids can lead to mutually beneficial partnerships for years to come.

Here is some of the key information you need to obtain on your subcontractor prequalification forms:

#### **General Information**

You want to get some basic information such as company ownership, current management, number of employees, and the states in which they have contractor licenses. You also want to find out about the size and scope of the projects they typically work on and whether they are certified as a Minority Business Enterprise.

#### Safety Records

At the very least, you need to get their OSHA 300 information and whether the sub-contractor has had any citations issued and their Experience Modification Rate for the previous three years. You can also inquire about their training program and whether or not they hold regular safety meetings.

#### Surety & Bonding Capacity

Find out the subcontractor's current surety provider, agent's name, and contact information. Be sure to ask about their bond rates for specific volumes along with their single project bonding capacity and their aggregate bonding capacity.

#### **Financial Standing**

Determine if the subcontractor has ever filed for bankruptcy and ask for their Dun & Bradstreet number if they have one. You can also ask them to provide other financial information such as current year revenues, total and current assets, net equity, current liabilities, and average monthly billings.

#### Litigation History

The first thing to determine is whether the subcontractor company, or any of the owners, has any active litigation. Find out if the subcontractor has had any labor law violations, had their license suspended or revoked, and if they've had any judgments filed against the company. You should also ask about any contract defaults and whether they've ever been terminated from a contract.

#### Ask for References

Ask your potential subcontractors to provide three to four reference contacts that can attest to both the quality and dependability of their company and employees and can also verify the company's creditworthiness.

### Final Thoughts on Prequalifying Subcontractors

General contractors should make their subcontractor prequalification process easily accessible. Create an online prequalification form that can be easily found on your company's website. Have a link to the form prominently featured on the page where you have your subcontractor opportunities or currently bidding projects listed.

If you are a subcontractor looking for more opportunities, you should contact general contractors in your area and ask to get prequalified with their company. You don't have to wait until they have a job that meets your company's capabilities. Be proactive and get prequalified first. This way, you'll get contacted by the general contractor first when they have an upcoming project requiring services your company provides.

# City Club Apartments Cleveland Celebrates Topping Out Construction Milestone

[ Article originally appeared in www.clevelandconstruction.com ]

Cleveland Construction, Inc., the contractor behind the City Club Apartments project in Cleveland, Ohio, celebrated a significant construction milestone as the project reached its full height.

The City Club Apartments project, a 23-story mixed-use development located on Euclid Avenue in downtown Cleveland, has been a collaborative endeavor for the 25 Northeast Ohio trade partners performing work on the project. Cleveland Construction's management team, trade partners, and design teams were present at the event to celebrate with all the craft professionals who have dedicated themselves to working on the project and reaching this milestone.

The topping out marks the project reaching its full height at over 250°, and work will now focus on the building's exterior skin and interior finishes. On July 26th, 2023, the final large concrete placement occurred on the building's curved roof to complete the project's superstructure. This final 170 cubic yard concrete placement was 374 days after the initial installation of

the building's mat foundation that took place on July 16th, 2022.

"The steel beam signing allowed our team to leave their mark on the project," said John Berg, Cleveland Construction's Senior Vice President of Operations. "This beam is a testament to the dedication and skill of the construction team, and will forever be a part of the building, representing the collective commitment to deliver a quality and on schedule project to City Club Apartments."

The "Topping Out" event not only celebrated the vertical completion of the structure but also paid tribute to the hard work, expertise, and collaboration between all the trade partners that have been integral to reaching this significant milestone.

As Cleveland Construction, Inc. concludes this phase of the City Club Apartments project, the team looks forward to the next phase of the project. The project is undergoing a phased occupancy construction process, that will allow the building's first residences to begin occupying the building's lower floors in the Fall of 2023. The entire building is scheduled to be completed in the Spring of 2024.
