California's carbon neutrality plan lacks vital detail

[Article originally appeared in www.calmatters.org]

By Dan Walters, CalMatters

In mid-November, the California Air Resources Board released its long-awaited "scoping plan" for the state that "would drastically reduce its dependence on fossil fuels and get to carbon neutrality by 2045 or earlier."

"The achievable roadmap for the world's fourth-largest economy proposes an unprecedented shift away from petroleum in every sector of the economy and a rapid transition to renewable energy resources and zero-emission vehicles," CARB promised. It added that by 2045 greenhouse gases would be reduced by 85% from 1990 levels, there would be a 71% reduction in "smog-forming pollution," fossil fuel consumption would decrease by 94%, 4 million new jobs would be created and Californians would see a \$200 billion decrease in health costs.

Gov. Gavin Newsom hailed the plan as a "comprehensive roadmap to achieve a pollution-free future" and "the most ambitious set of climate goals of any jurisdiction in the world." He predicted that "it'll spur an economic transformation akin to the industrial revolution."

The 297-page plan is loaded with data and verbiage about the perils of climate change and various goals that it seeks to achieve. However, there is precious little detail about the specific steps that would be needed in the next 22 years,

nor about the downsides and tradeoffs that the economic transformation it advocates would inevitably pose.

We've already experienced some of the difficult effects, such as an electric power system that's flirted with meltdown as traditional fossil-fueled power plants are phased out in favor of renewable juice from solar and wind generation. That forced Newsom to keep some of those plants, as well as the Diablo Canyon nuclear plant, functioning longer than expected.

Another example of transition pain has been the Public Utilities Commission's tortured efforts to reduce subsidies for rooftop solar arrays by reducing payments for feeding power back into the grid. It did so to minimize adverse financial impacts on utilities such as Pacific Gas and Electric and Southern California Edison and the vast majority of their customers who don't have solar panels on their roofs.

Similarly, while the state touts the climatic benefits of battery-powered cars and promises a phaseout of oil fields, refineries and gas stations, it could reach a tipping point that would leave owners of gasoline- and diesel-powered vehicles without enough fuel to keep on running.

The lack of specificity in CARB's 2045 scoping plan caught the eye of the Legislature's budget analyst, Gabe Petek, and last week, his office released a sharply critical report on its omissions.

The 4 Different Types of Construction Contracts

[Article originally appeared in www.bigrentz.com]

By BigRentz

Understanding the different types of construction contracts is essential, as they determine what you pay, what you're liable for, and many other aspects of the job. A contract protects both the builder and the owner by ensuring expectations are clear from the beginning and avoiding potential headaches caused by overages and other unexpected issues. There are many types of building contracts, and they are usually tailored to the needs of the project.

To help you get familiar with your options, we explained the differences between different types of contract and when you should consider using each one for your projects. We use "builder" to refer to the entity carrying out the construction services and "owner" to refer to the entity contracting the builder to carry out construction services. Learn below about the four most common types of construction contracts.

1. Lump Sum Contract

A lump sum contract sets one determined price for all work done for the project. These construction contracts are also called "fixed price" or "stipulated sum" contracts.

Incentives are sometimes built into these contracts to reward the builder if the job is completed ahead of schedule. These agreements can also include penalties, sometimes called "liquidated damages," for a job that is completed late. Owners typically use these types of contracts to steer clear of change orders for any additional or otherwise undetermined work.

When signing a lump sum contract, the builder takes on additional risk since the owner is not obligated to pay more than the original price if the project goes out of scope, problems come up or any other changes occur during the project. Some lump sum contracts account for this by including separate allowances that cover unforeseen costs and changes.

If an owner decides to use a lump sum contract on a project, builders can typically charge a higher fee to account for the additional risk they are taking on. Otherwise, any unforeseen costs can either eat into a builder's profit or result in a project that may not be completed as envisioned.

When to Sign

Lump sum contracts are ideal for projects with a defined timeline and scope of work. If these are not clearly agreed upon, it can be difficult for builders to estimate cost ahead of time and avoid any overscopes.

2. Unit Price Contract

Unit price contracts typically emphasize the types of tasks being carried out in addition to the materials used on those tasks. This categorized style of pricing makes it easier for owners to evaluate each cost and allows builders to more accurately charge for each category.

This type of construction contract is not typically used for major construction projects and is more often used for smaller jobs like repair or maintenance work. With unit price contracts, it's easier to adjust prices when the scope of work changes.

When to Sign

Unit price contracts are more commonly used for repetitive work and public works projects. For example, routine building maintenance could more easily be charged through a unit price contract, since it specifies the values of different maintenance tasks required (e.g. painting, testing insulation, etc.).

3. Cost Plus Contract

Cost plus contracts normally require the owner to pay for all project expenses, like the cost of materials, labor and any other projects costs. Additionally, these types of contracts will also include an agreed-upon amount or percentage that covers the builder's overhead costs and profit that the owner also pays.

Depending on the type of cost plus contract, the owner may end up paying more than anticipated and therefore generally takes on more risk than the builder

Different Types of Cost Plus Contracts

There are different types of cost plus contracts that cater to different project needs. Each contract type also reduces varying levels of risk for the owner. Here are some examples:

- Cost plus fixed percentage: Payment covers both the associated project costs and the builder's profit and overhead. The amount paid for the builder's profit and overhead is dependent on a fixed percentage of the project cost.
- Cost plus fixed fee: Payment includes coverage of the associated project's costs as well as a fixed fee that covers the builder's profit and overhead.

SKANSKA

Subcontractor/Supplier Bids/Proposals Requested San Bernardino Valley Municipal Water District SPEC 22-02

Proposal Due Date February 7, 2023-10:00 AM

Skanska is interested in soliciting in Good Faith with all DBE Subcontractors and Suppliers for the following project:

Enhanced Recharge In The Santa Ana River Basins-Phase 1B Highland, CA

Plans and Specifications are available through registering on our plan site at: cted.com/public/59b1c0096

Requested scopes include, but are not limited to the following and should be based on the Contract and its amendments: Site Security, Traffic Control, Signs, Fence, SWPPP, Readymix, Concrete Removal, Saw Cutting, Clearing and Grubbing, Excavation, Riprap, Aggregate Base Course, Material Processing, Geotextile, Irrigation, Seeding, Testing & Inspection, Survey, Electrical & Instrumentation, Rebar, Trucking, Equipment Rental, Erosion Control, Reinforced Concrete Piping, Structural Concrete, Surveying, Slide Gates

Accepted Disadvantaged Business Enterprises specific to this project are:

- Entities owned and/or controlled by socially and economically disadvantaged individuals as described by Title X of the Clean Air Act Amendments of 1990 (42 U.S.C. 7601 note) (10% statute), and Public Law 102-389 (42 U.S.C. 4370d) (8% statute), respectively;
- Minority Business Enterprise (MBE) entities that are at least 51% owned and/or controlled by a socially and economically disadvantaged individual as described by Title X of the Clean Air Act Amendments of 1990 (42 U.S.C. 7601 note), and Public Law 102-389 (42 U.S.C. 4370d), respectively.
- Women Business Enterprise (WBE) entities that are at least 51% owned and/or controlled by women.
- Small Business Enterprise (SBE);
- · Labor Surplus Area Firm (LSAF): or
- · Historically Underutilized Business (HUB) Zone Small Business Concern or a concern under a successor program Certifying DBE Firms:

Under the DBE Program, entities can no longer self-certify, and contractors and sub-contractors must be certified at bid opening. Contractors and sub-contractors must provide to the CASRF recipient proof of DBE certification. Certifications will be accepted from the following:

- The U.S. Environmental Protection Agency (USEPA)
- The Small Business Administration (SBA)
- The Department of Transportation's State implemented DBE Certification Program (with U.S. citizenship)
- · Independent private organization certifications If an entity holds one of these certifications, it is considered acceptable for establishing status under the DBE Program

Requirements: Skanska is an Equal Opportunity Employer and is requesting quotes from all qualified subcontractors and suppliers. Skanska will assist qualified subcontractors, vendors, & suppliers in obtaining bonding, lines of credit, insurance, necessary equipment, materials and/or supplies. If you are a DBE Company, please provide your certification letter with your proposal. If you are a non-DBE, please indicate all lower-tier participation on your quotation as it will be evaluated with your price. In order to assist DBE subcontractors and suppliers, we will divide total requirements into smaller packages, tasks or quantities & establish delivery & construction schedules which will permit maximum participation when feasible.

Insurance requirements are Commercial General Liability (GL): \$1M ea. occ., \$1M personal injury, \$2M products and completed operations agg. and general agg.; \$1M Auto Liability; \$5M Excess/Umbrella and \$1M Workers Comp. Endorsements and waivers required are the Additional Insured End., Primary Wording End., and a Waiver of Subrogation (GL & WC). Other insurance requirements may be necessary per scope or RFP requirement. Subcontractors may be required to furnish performance and payment bonds in the full amount of their subcontract by an admitted surety and subject to approval by Skanska. Quotations must be valid for the same duration as specified by the Owner for contract award. Conditions or exceptions in Subcontractor's quote are expressly rejected unless accepted in writing. Skanska is signatory to the Operating Engineers, Laborers, Cement Masons, and Carpenters Unions. Subcontractors must provide weekly, one original and one copy of all certified payrolls, including non-performance and fringe benefit statements if required by law or by the Prime Contract. All Contractors and Subcontractors must register with the DIR (Department of Industrial Relations) in order to bid on public works projects. Please include CSLB License Number and DIR Number on all quotes submitted.

California's carbon neutrality plan lacks vital detail

Continued from page 1

"Despite the significant reductions needed to meet these goals, CARB's plan does not identify which specific policies it will implement," the report summarized. "For example, the plan is unclear regarding how much the state will rely on financial incentives, sector-specific regulatory programs, or cap-and-trade. Rather, the plan's estimated reductions are driven primarily by assumptions developed by CARB, without specifying how those assumed outcomes might be achieved."

Petek's report said the plans lapses could undermine the state's ability to actually meet the 2045 goal and "Failing to develop a credible plan to meet statewide (greenhouse gas) goals could adversely affect California's ability to serve as an effective model for other jurisdictions or demonstrate global leadership.3

The report is particularly critical of the plan's ambitious interim goals for 2030, just seven years away, saying it doesn't give the Legislature and state agencies information they would need to adopt policies to hit the 2030 marks.

Issuing vague promises about achieving such a massive transformation without details is not a plan. A real plan would tell Californians in advance how their lives would be affected.

The 4 Different Types of Construction Contracts

Continued from page 1

• Cost plus with guaranteed maximum price (GMP) contract: Payment includes the coverage of the associated project costs and a fixed fee that is paid up to a maximum cost. If the GMP is not reached, the difference between the total cost and GMP will not be paid out, which results in savings for the owner. The builder and owner may also agree to split the savings, providing the builder an incentive to keep costs under the GMP.

When to Sign

Cost plus contracts are normally used when the scope of work, materials, labor and equipment is not clearly defined or difficult to estimate from the beginning. Projects using this type of contract are more likely to be completed as envisioned since builders are not completely limited by cost. However, this contract type is more complex to manage and requires close tracking.

4. Time and Materials Contract

Time and materials contracts define an hourly or daily rate for builders. In addition to paying this rate, owners also agree to pay any related project costs, which are noted in the contract as direct, indirect, markup and overhead costs.

When to Sign

Time and materials contracts are also typically used when the scope of work is unclear and carry less risk when used for small projects where owners can better estimate the project's scope to anticipate the final cost. Price or project duration caps are also common for this contract to mitigate the owner's risk.

Understanding the different types of construction contracts helps you decide what type is right for you and your project. Along with the contract, there are many other moving parts to consider, like the amount of labor you'll need, the construction technology you should consider and the major machinery you'll need for the job. Consider implementing value engineering into your next project to help you weigh out cost and material options to ensure you are getting the best value. Take a look through our catalog of heavy equipment to look through your renting options.

SOURCE: https://www.bigrentz.com/blog/construction-contracts

Four Common Types of Construction Contracts

Lump Sum

One fixed priced is defined to fully cover project

Unit Price

Categorized tasks and materials are individually priced out

Cost Plus

Project costs are fully covered in addition to a separate payment to cover profit and overhead

Time and Materials

Project costs are fully covered in addition to a separate payment based on an hourly or daily rate
