

The Future of Preconstruction: Looking Ahead to 2030

[Article originally appeared in <https://constructionexec.com>]

By Jeff Gerardi

Preconstruction has changed dramatically over the past decade. What was once a fragmented, manual process driven by spreadsheets and email threads is now far more collaborative, data-driven and technology-enabled. Yet despite this progress, preconstruction is still in the early stages of transformation.

Owners and contractors increasingly understand that strong preconstruction reduces risk and improves cost certainty. Looking toward 2030, that investment will only accelerate as AI adoption grows, sustainability goals become more urgent and teams demand tighter connections between planning and execution.

DEEPER INTERGRATION OF DESIGN AND ESTIMATING

Today's cloud-based tools have improved collaboration, but design and estimating still offer major opportunities for improvement. As projects grow more complex and timelines compress, tighter integration will become essential.

In the near future, design and estimating will be highly data-driven and in real time. Cost feedback will surface instantly as designs change, allowing teams to understand the financial impact of decisions as they're made. RFIs, issues and design updates will flow seamlessly between design and preconstruction, reducing silos and helping teams identify problems earlier.

The result will be faster iterations, better alignment and greater transparency. Contractors gain

If Xavier Becerra is California's next governor, he'll be a workhorse rather than a show horse

[Article originally appeared in <https://calmatters.org>]

By Dan Walters, CalMatters

In the eight decades since the end of World War II, 11 men have served as governor of California — counting Jerry Brown twice.

Six, beginning with Earl Warren, have been Republicans and the remaining five, including current Gov. Gavin Newsom, have been Democrats.

However, there's another way of differentiating their governorships — whether they were content to govern or yearned for higher office. That's also a 6-5 split, the majority having national ambitions and the minority focused on governing.

Newsom's governorship has about six months remaining, after which he will almost certainly launch his campaign for president. He is in the same ambitious category as Warren, the 1948 GOP candidate for vice president who

later became chief justice of the U.S. Supreme Court.

Another Republican governor, Ronald Reagan, sought and won the presidency. The four others — Goodwin Knight, George Deukmejian, Pete Wilson and Arnold Schwarzenegger — pretty much stuck to governing.

The same could be said of Democrats Pat Brown and Gray Davis, while Pat Brown's son Jerry had two very different stints as governor, running for president twice and the U.S. Senate once during his first eight years, but sticking to the job after returning to the governor's office 28 years later.

This bit of gubernatorial history sets the stage for what is likely to be another governance-oriented regime by Democrat Xavier Becerra.

Becerra will face Republican Steve Hilton in the November general election and is the overwhelming favorite. It's been two decades since any Republican won statewide office in California (Schwarzenegger's re-election in 2006), and

Democrats have a very wide advantage over the GOP in registered voters — 45% to 25%.

Given the odds in Becerra's favor, some speculation about his forthcoming governorship is warranted.

Personally, Becerra is a 180-degree departure from the verbose, ever-bragging Newsom. He's soft-spoken, obviously proud of his background as the son of working-class immigrants in Sacramento, and a dedicated ally of labor unions. Rather than climbing the political ladder one rung at a time, as Newsom has done, Becerra advanced largely through appointments.

After stints as an attorney in the state Department of Justice and a legislative aide, Becerra served one term in the state Assembly, put in 24 years as a Southern California congressman and was appointed attorney general in 2017 by Jerry Brown, filling the vacancy caused by Kamala Harris's election to the Senate. Four years later, newly elected President Joe Biden named him

health and welfare secretary. He left the post last year and launched his campaign for governor shortly thereafter.

Becerra was seemingly stuck in the lower tier of candidates and unlikely to make the primary election cut until fortune intervened.

In April, Rep. Eric Swalwell, who was leading in the polls, pulled out of the race and resigned from Congress amidst allegations of sexual harassment and abuse, leaving billionaire Tom Steyer as the leading candidate.

But overnight, or so it seemed, business interests, labor unions and other elements of the political establishment pumped money and other resources into Becerra's campaign. That ultimately resulted in a top primary finish and a spot on the November ballot.

Given his background, it's unlikely that as governor Becerra would try to make attention-get-

ting splashes as Jerry Brown did in the 1970s and Newsom has done since 2019. He will have a very full plate of issues that remain unresolved, including crises in homelessness and housing, poverty and California's loss of business and population to other states.

Becerra's governorship will probably resemble that of Brown's second stint, dealing with real issues rather than grandstanding. That would be a fine model to emulate.

The Future of Preconstruction: Looking Ahead to 2030

Continued from page 1

stronger cost and schedule certainty, while owners and designers gain confidence in the decisions they make upstream.

PREDICTIVE ANALYTICS FOR PROACTIVE RISK MANAGEMENT

Predictive analytics already help teams anticipate budget and design risks, but their capabilities will expand significantly over the next several years. By analyzing historical data and patterns, AI will surface potential risks earlier and more accurately.

Machine learning will also inform broader contingency planning by accounting for factors like market volatility and supply-chain disruption. These insights will allow teams to adjust designs, budgets and strategies before risks materialize, leading to more reliable outcomes and a competitive edge for those who adopt early.

AUTOMATION AND THE EVOLVING ESTIMATOR ROLE

Automation will continue to remove repetitive work such as manual takeoff and data entry, but it won't replace estimators. Instead, estimators will shift from tactical execution to strategic advisory roles.

With AI handling routine tasks, estimators can focus on scenario analysis, value engineering and client guidance. As a result, data literacy and technology fluency will become as important as traditional estimating skills.

2030 PREPARING FOR 2030

Preconstruction is moving toward a more intelligent, connected future. AI and automation are already shaping workflows today and that impact will only grow. Teams that start planning now by investing in tools, building data skills and rethinking workflows will be best positioned for success in 2030 and beyond.

Lithium-Ion Batteries: Power Your Devices Safely
Lithium-ion batteries power many everyday items such as smartphones, laptops, e-bikes, scooters, toys, and smoke alarms. While convenient, these batteries store a large amount of energy and can overheat, catch fire, or explode if damaged or used improperly.

Protect Your Home with These Safety Tips:
•Buy Smart: Choose devices and batteries tested by a nationally recognized safety laboratory.

•Charge Safely: Use the charger designed for your device. Never charge batteries on beds, couches, or under pillows.
•Watch for Warning Signs: Stop using batteries that become hot, change shape, leak, or make unusual noises.
•Recycle Responsibly: Never throw lithium-ion batteries in the trash. Take them to a certified battery recycling location.
•If a battery overheats or catches fire, move away and call 9-1-1.
